Docket 2039(EDillon)

II. AMENDMENTS TO THE CLAIMS

1. (currently amended) A method for forming a masonry unit, said method comprising the steps of:

raising a pallet to a bottom surface of a mold;

inserting a filler plug into the side of the mold between a partition plate and a pallet;

dispensing mix into the mold;

compressing the mix with a shoe; [[and]]

responsive to the compressing, forming a filler plug effect in the compressed mix whereby a masonry unit having a filler plug effect is provided; and

responsive to the compressing, forming a substantially constant angle of inclination between a front surface and opposing side surfaces, a top surface, and a bottom surface of the compressed mix corresponding to said masonry unit to be formed by compressing the mix with the shoe against opposing side gussets and the filler plug.

- 2. (original) The method of claim 1, further including the step of removing the filler plug.
- 3. (original) The method of claim 1, further including the step of stripping the architectural concrete masonry unit from the mold by lowering the pallet.
- 4. (previously presented) The method of claim 1, wherein the step of forming includes forming a bottom bevel in the compressed mix such that a masonry unit with a bottom
